Application Serial No. 10/806,937

1. (Original) A cryptographic device comprising:
a cryptographic module and an interchangeable
communications module removably coupled thereto;

said cryptographic module comprising a user
network interface and a cryptographic processor coupled
thereto;

said communications module comprising a network
communications interface coupled to said cryptographic
processor;

said cryptographic processor communicating with
said user network interface using a predetermined protocol,
and said cryptographic processor communicating with said
network communications interface using the predetermined
protocol.

1. (Original) A cryptographic device comprising:
a cryptographic module and a communications
module coupled thereto;

said cryptographic module comprising a user
network interface and a cryptographic processor coupled
thereto;

said communications module comprising a network
communications interface coupled to said cryptographic
processor;

said cryptographic processor communicating with
said user network interface using a predetermined protocol,
and said cryptographic processor communicating with said

Application Serial No. 10/806,937

network communications interface using the predetermined protocol;

said user network interface comprising a plurality of different connectors for coupling the cryptographic module to different network devices.
